PRESSURE MEASURING

WITH COOLING ELEMNT

www.aramakco.com

Introduction

Aramak heat dissipator is the perfect accessory for the pressure gauges deigned to ensure that the pressure measurements are taken under optimal conditions. This high-quality device acts as an efficient radiator, dissipating the heat generated by the fluid under measurement to the pressure gauges, and preventing potential temperature fluctuations that could affect the accuracy of the measurements. With our heat dissipator, a reduced and stable temperature is maintained in the pressure gauges, enabling more precise and reliable measurements at all times. By reducing heat buildup, this accessory protects the integrity of the measurement instruments, extending their lifespan and preventing potential damage through over heating. The installation of Aramak heat dissipator is simple and adaptable to a wide range of pressure gauges.

Furthermore, the compact and durable design ensures optimal performance even in demanding environments. Ensure Precise and Stable Measurements with Our Heat Dissipator. Don't let heat compromise the accuracy of your measurements. Our heat dissipator provides you with the peace of mind knowing that your pressure gauges are operating under ideal conditions, without thermal fluctuations that could impact your measurements.

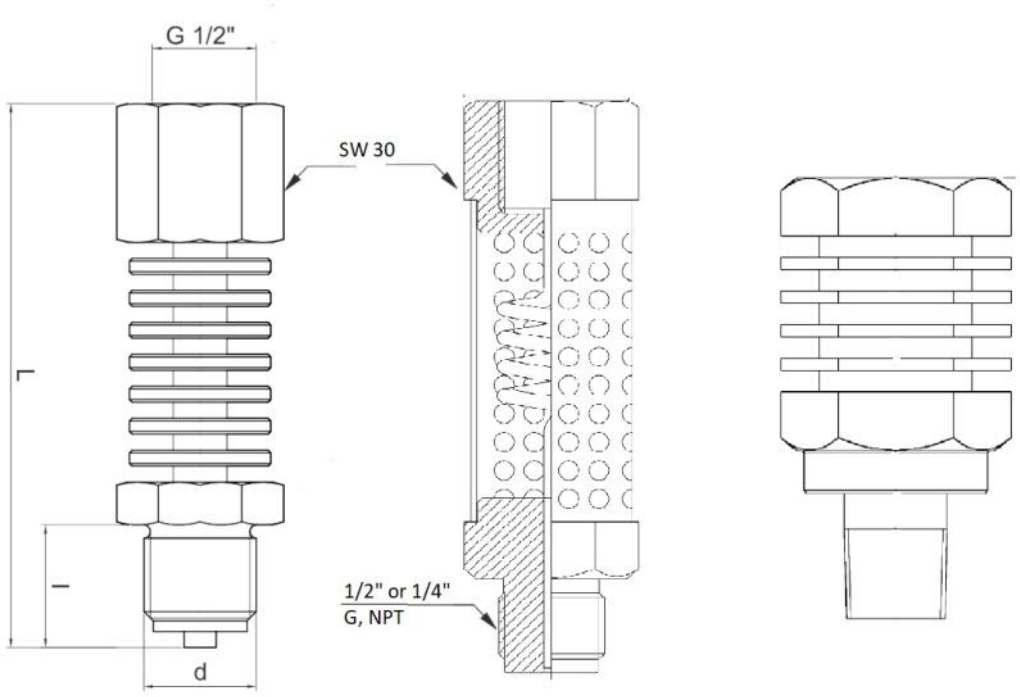

Applications

- Clean (no particulate) media, gases
- When used with a diaphragm seal, the pressure rating of the diaphragm seal must be acknowledged
- Extreme high temperature installations
- Used in oil & gas installations, chemical processing and mining

Specification

- Socket/Body : S.S. 316L or S.S. 304L
- Tube : S.S. 316L
- Maximum Operating Pressure: 1,500 psi
- Maximum Process Temperature : 300°C or 500°C
- Connection:

  1/4” NPTM x 1/4” NPTF
  1/2” NPTM x 1/2” NPTF
  1/4” NPTM x 1/2” NPTF
